

**Supplementary 5: *t*-distributed stochastic neighbour embedding (*t*-SNE; Van der Maaten & Hinton, 2008) across ten random initialisations**

**Figure 1.** Pairwise Local Continuity Meta-Criterion (LCMC) across the ten embeddings. The mean = 0.78.

**Figures 2-11 (below):** The distribution of all 528 pipelines with respect to pairwise Euclidean distances in the LPP difference scores across the condition vector, in the two-dimensional space after embedding with *t*-SNE from ten random initialisations.
